Working student (f/m/d) Web Development

heatbeat is a start-up that has digitalized the planning and operation of heating network systems. Support our team and actively participate in the energy and heating transition in Germany together with us!

📍 Aachen, Nuremberg, remote   🕐 10 – 20 h/week   🗓 as of now

Your profile and your skills

- Ongoing studies related to web development
- Enjoy digital working methods and software development
- Experience in at least one of the areas we use to develop our digital twin on the web Python, Django, React, HTML/CSS/JavaScript are an advantage
- High reliability and good self-organization

We offer

- Exciting insight into software development for digitized planning
- Flexible working hours and the opportunity to combine studies and work
- The necessary technical equipment to carry out your work
- Dynamic team in a growing company
- You can work remotely or in our offices in Aachen or Nuremberg
- Lots of new impulses and room for your personal growth

Your tasks

As a working student (f/m/d) you're an important part of our team. As such, we offer you the opportunity to take responsibility and gain valuable experience in our project work. Possible tasks include:

- Ongoing improvement of our web app in terms of usability, design and performance
- Development of new features in areas such as interactive display of measurement data, integration of simulation models and results, and analysis of georeferenced data sets
- Creation and improvement of automated tests and continuous improvement of our code base and processes

About us

At heatbeat, we support energy suppliers, municipal utilities and local authorities to better plan and operate their heat supply systems. To do this, we use the heatbeat Digital Twin for digital planning and simulation of these complex energy systems. We are already using the heatbeat Digital Twin in many exciting projects for our customers and would like to develop it further.

With our way of working, we are at the interface between engineering services, software development and planning. We want to accelerate the transformation of energy systems through consistent digitalization and to develop innovative and sustainable solutions for our customers.

We invite you to visit our homepage for more information and a selection of our projects and use cases, or follow us on LinkedIn.

Application

We are looking forward to your application. If you are interested in the position, just send us a short email with your resume and we will get back to you as soon as possible.
